PRINTS TIRADOS DURANTE A AULA DE 27/08/2024:

cutoff = 0,5.

Matriz de Confusão (Confusion Matrix):

Classified	True		
	1	0	
1	TP	FP	Precision = $\frac{TP}{TP + FP}$
0	FN	TN	

$$\text{Sensitividade (Recall)} = \frac{TP}{TP + FN}$$

$$\text{Especificidade} = \frac{TN}{FP + TN}$$

$$\text{Acurácia (EGM)} = \frac{TP + TN}{TP + FP + FN + TN}$$

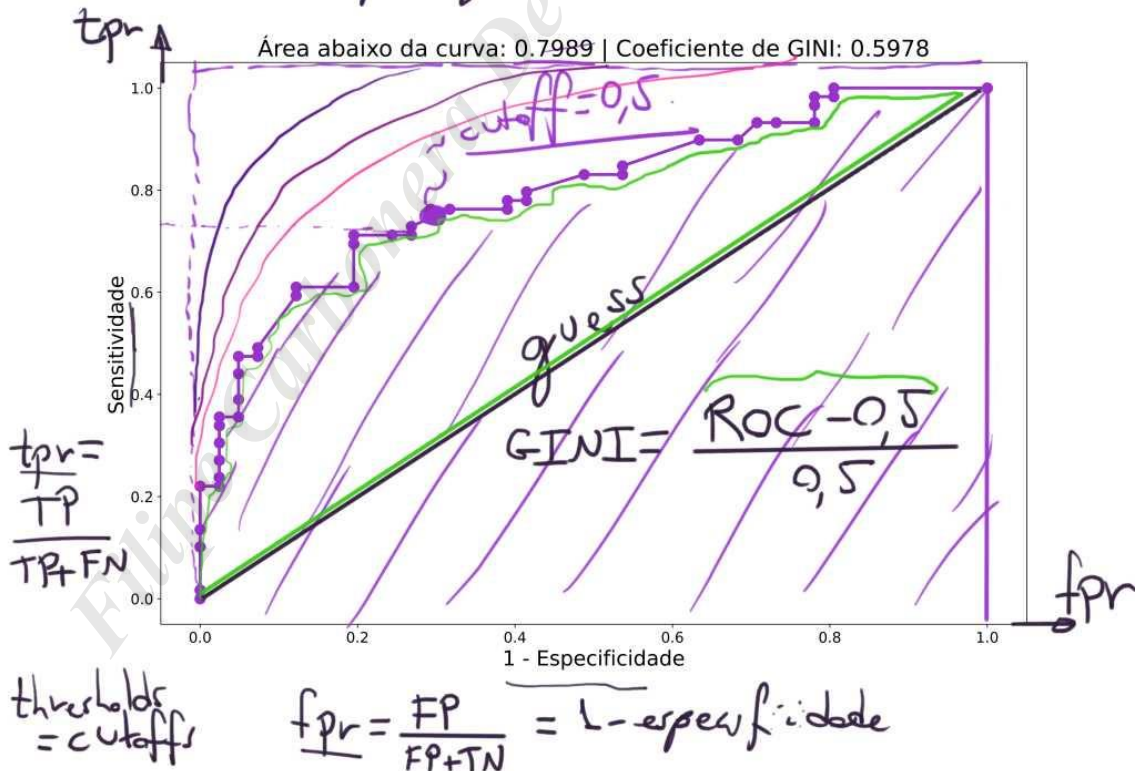

$$F1\text{-score} = \frac{2 \times \text{Recall} \times \text{Precision}}{(\text{Recall} + \text{Precision})}$$

Média Harmônica entre Recall e Precision.

Para Determinado cutoff!

ROC: Receiver Operating Characteristic

Indicadores / Estatísticas :

Independem do
cutoff.

• $\text{LogLik}(LL_m \rightarrow LL_f) \uparrow$

• χ^2 (p-value $\chi^2 \rightarrow$ compara ao p-value F).

$$\chi^2 = -2(LL_0 - LL_m).$$

• $AIC = -2 \cdot LL_m + 2 \cdot (\underline{k} + 1)$

• $BIC = -2 \cdot LL_m + (\underline{k} + 1) \cdot \ln(n)$

$$GINI = \frac{ROC - 0,5}{0,5}$$
